

Fermacell GmbH

Fermacell GmbH produces and distributes high-quality building materials for the dry lining boards market and is the market leader with gypsum fibre boards. Fermacell stands for the dry construction and fire protection business unit of the building material company, the Xella Group. Fermacell is one of the best known construction material brands in Europe today.

The main business segments of Fermacell GmbH are the fermacell gypsum fibre board range for dry lining and interior work of walls, ceilings and floorings as well as fermacell Powerpanel for wet rooms and external wall areas. The fire protection boards of fermacell AESTUVER complete the range.

The fermacell gypsum fibre boards range is suitable for use in new construction as well as renovation. Wall and flooring elements offer professionals as well as home builders economic heavy duty solutions for all areas of dry interior work. The gypsum fibre boards are made up of gypsum and cellulose paper fibres, which are mixed with water and pressed into stable boards, then dried and cut to size. The ecological product composition is a strong trend today – the boards are biologically tested.

The business focus in Australia and New Zealand is to establish sales and distribution partnerships with local manufacturers and partners. Mr Michael von Esden-Tempsky, Head of Export Sales, would like to meet with Australian building sector specialists for:

- pods and modular building
- pre-fabricated housing
- timber construction
- flooring renovations
- Raised access and hollow floor manufacturer
- dry wall installation
- fire protection
- noise and impact sound insulation

Further product and company information is available at
