

Dr Hermine Hitzler – plan bee

plan bee, acquired in 2011 by Dr Hermine Hitzler, is a process-oriented consultancy focused on energy and resource efficiency in production processes.

Dr Hitzler also develops comprehensive energy concepts for individual buildings, housing developments and production sites. Furthermore, she offers sustainability management advice for corporates.

Over the past 25 years, Dr Hitzler has collaborated with businesses in a broad range of industry sectors as well as research institutes and universities, especially in the biotechnology and healthcare space. She has assisted communities and urban designers to create a holistic view on energy and resource usage in the urban planning environment.

Clients of plan-bee benefit from:

- durable energy savings by reducing energy consumption and not only costs
- extensive knowledge of latest products and technologies
- ability to combine energetic building equipment requirements as well as process engineering, e. g. waste heat management in buildings
- design of self-contained energy concepts in urban and rural quarters
- comprehensive consultation to set energy concepts into efficient use

Dr Hitzler would like to meet with executives and managers interested in the optimisation of energy usage in industrial processes. Furthermore, she would like to meet with building engineers, energy consultants & project developers who are interested in knowledge exchange to broaden their competence in the use of renewable energy technologies. She would also like to establish cooperation with communities in Australia to discuss lessons learned from German and European strategies, concepts and projects already implemented.
