

PPSI – Consulting Engineer Peter Vespermann

As a consultant for sustainability and energy efficiency management in buildings, Peter Vespermann relies on 20 years of experience in the German renewable energy and energy efficiency markets.

The basis of his work is a comprehensive cost analysis supporting decisions in favour of alternative energy concepts, such as low-energy & passive house standard building concepts with low energy use and maintenance costs.

In addition to his professional background in building technology and mechanical engineering, Mr Vespermann also focuses on the concept of innovative energy supply systems that make use of regenerative fuel sources.

PPSI (<http://www.ppsi.de/index-engl.html>) provides business clients with a diverse range of solutions and services, such as:

- Concept planning for energy systems making use of regenerative fuel sources (solar, biomass, biogas, geothermal)
- Analysis of existing energy system performance and suggestions for energy efficiency improvements for existing buildings and industrial facilities (insulation, heating, cooling, ventilation, compressed air, solar cooling systems, electrical drives, PV systems and solar thermal systems, lighting)
- Process optimization of the energy supply process
- Preparation of Energy Performance Certificates for residential and commercial buildings
- Preparation of Thermal Insulation certificates
- Energy balance analyses of properties and projects
- Finance consulting for SMEs
- Lecturer for the EUREM "European Energy Manager" training

Mr Vespermann would like to share his experiences and meet with architects and engineers, energy consulting firms and project developers who require assistance with designs and calculations of energy performance. He would also like to liaise with industry associations, city councils and universities in Australia.

If you are interested in a meeting, please contact:
